

7 Assessment Masters

Risk assessment

Risk assessment is a process for identifying hazards, potential (future) events which may negatively impact on individuals, assets, and/or the environment

Risk assessment is a process for identifying hazards, potential (future) events which may negatively impact on individuals, assets, and/or the environment because of those hazards, their likelihood and consequences, and actions which can mitigate these effects. The output from such a process may also be called a risk assessment. Hazard analysis forms the first stage of a risk assessment process. Judgments "on the tolerability of the risk on the basis of a risk analysis" (i.e. risk evaluation) also form part of the process. The results of a risk assessment process may be expressed in a quantitative or qualitative fashion.

Risk assessment forms a key part of a broader risk management strategy to help reduce any potential risk-related consequences.

List of Boys II Planet contestants

performances they have prepared, in front of the masters and the other contestants. After each performance, the masters would then re-assess and re-categorize every

Boys II Planet is a South Korean reality competition series, where trainees from around the world, primarily South Korea, Great China, Japan, Thailand, the United States, and various other countries, competed to debut in an eight-member boy group. The 160 contestants were initially divided into two planets: Planet K features Korean contestants and Planet C primarily from Greater China, each consisting of 80 individuals, merging after the first two episodes. They will battle for the opportunity to debut as a single boy group, although details such as the group's final lineup, name, and contract length remain unknown.

Master of Business Administration

degree Master of Social Science (MSS), a postgraduate degree Master of Project Management (MSPM or MPM), a postgraduate project management degree Masters of

A Master of Business Administration (MBA) is a professional degree focused on business administration. The core courses in an MBA program cover various areas of business administration; elective courses may allow further study in a particular area but an MBA is normally intended to be a general program. It originated in the United States in the early 20th century when the country industrialized and companies sought scientific management.

MBA programs in the United States typically require completing about forty to sixty semester credit hours, much higher than the thirty semester credit hours typically required for other US master's degrees that cover some of the same material. The UK-based Association of MBAs accreditation requires "the equivalent of at least 1,800 hours of learning effort", equivalent to 45 US semester credit hours or 90 European ECTS credits, the same as a standard UK master's degree. Accreditation bodies for business schools and MBA programs ensure consistency and quality of education. Business schools in many countries offer programs tailored to full-time, part-time, executive (abridged coursework typically occurring on nights or weekends) and distance learning students, many with specialized concentrations.

An "Executive MBA", or EMBA, is a degree program similar to an MBA program that is specifically structured for and targeted towards corporate executives and senior managers who are already in the

workforce.

Apollo 7

Apollo 7 (October 11–22, 1968) was the first crewed flight in NASA's Apollo program, and saw the resumption of human spaceflight by the agency after the

Apollo 7 (October 11–22, 1968) was the first crewed flight in NASA's Apollo program, and saw the resumption of human spaceflight by the agency after the fire that had killed the three Apollo 1 astronauts during a launch rehearsal test on January 27, 1967. The Apollo 7 crew was commanded by Walter M. Schirra, with Command Module Pilot Donn F. Eisele and Lunar Module pilot R. Walter Cunningham (so designated even though Apollo 7 did not carry a Lunar Module).

The three astronauts were originally designated for the second crewed Apollo flight, and then as backups for Apollo 1. After the Apollo 1 fire, crewed flights were suspended while the cause of the accident was investigated and improvements made to the spacecraft and safety procedures, and uncrewed test flights made. Determined to prevent a repetition of the fire, the crew spent long periods monitoring the construction of their Apollo command and service modules (CSM). Training continued over much of the 21-month pause that followed the Apollo 1 disaster.

Apollo 7 was launched on October 11, 1968, from Cape Kennedy Air Force Station, Florida, and splashed down in the Atlantic Ocean eleven days later. Extensive testing of the CSM took place, and also the first live television broadcast from an American spacecraft. Despite tension between the crew and ground controllers, the mission was a complete technical success, giving NASA the confidence to send Apollo 8 into orbit around the Moon two months later. In part because of these tensions, none of the crew flew in space again, though Schirra had already announced he would retire from NASA after the flight. Apollo 7 fulfilled Apollo 1's mission of testing the CSM in low Earth orbit, and was a significant step towards NASA's goal of landing astronauts on the Moon.

United States Army Special Forces selection and training

States Army Special Forces. Phase I of the Q Course is Special Forces Assessment and Selection (SFAS). A candidate who is selected at the conclusion of

The Special Forces Qualification Course (SFQC) or, informally, the Q Course is the initial formal training program for entry into the United States Army Special Forces. Phase I of the Q Course is Special Forces Assessment and Selection (SFAS). A candidate who is selected at the conclusion of SFAS will enable a candidate to continue to the next of the four phases. If a candidate successfully completes all phases they will graduate as a Special Forces qualified soldier and then, generally, be assigned to a 12-men Operational Detachment "A" (ODA), commonly known as an "A team." The length of the Q Course changes depending on the applicant's primary job field within Special Forces and their assigned foreign language capability but will usually last between 56 and 95 weeks.

Climate change

II to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change. Cambridge University Press. ISBN 978-0-521-88010-7. Schneider, S. H

Present-day climate change includes both global warming—the ongoing increase in global average temperature—and its wider effects on Earth's climate system. Climate change in a broader sense also includes previous long-term changes to Earth's climate. The current rise in global temperatures is driven by human activities, especially fossil fuel burning since the Industrial Revolution. Fossil fuel use, deforestation, and some agricultural and industrial practices release greenhouse gases. These gases absorb some of the heat that the Earth radiates after it warms from sunlight, warming the lower atmosphere. Carbon dioxide, the

primary gas driving global warming, has increased in concentration by about 50% since the pre-industrial era to levels not seen for millions of years.

Climate change has an increasingly large impact on the environment. Deserts are expanding, while heat waves and wildfires are becoming more common. Amplified warming in the Arctic has contributed to thawing permafrost, retreat of glaciers and sea ice decline. Higher temperatures are also causing more intense storms, droughts, and other weather extremes. Rapid environmental change in mountains, coral reefs, and the Arctic is forcing many species to relocate or become extinct. Even if efforts to minimize future warming are successful, some effects will continue for centuries. These include ocean heating, ocean acidification and sea level rise.

Climate change threatens people with increased flooding, extreme heat, increased food and water scarcity, more disease, and economic loss. Human migration and conflict can also be a result. The World Health Organization calls climate change one of the biggest threats to global health in the 21st century. Societies and ecosystems will experience more severe risks without action to limit warming. Adapting to climate change through efforts like flood control measures or drought-resistant crops partially reduces climate change risks, although some limits to adaptation have already been reached. Poorer communities are responsible for a small share of global emissions, yet have the least ability to adapt and are most vulnerable to climate change.

Many climate change impacts have been observed in the first decades of the 21st century, with 2024 the warmest on record at +1.60 °C (2.88 °F) since regular tracking began in 1850. Additional warming will increase these impacts and can trigger tipping points, such as melting all of the Greenland ice sheet. Under the 2015 Paris Agreement, nations collectively agreed to keep warming "well under 2 °C". However, with pledges made under the Agreement, global warming would still reach about 2.8 °C (5.0 °F) by the end of the century. Limiting warming to 1.5 °C would require halving emissions by 2030 and achieving net-zero emissions by 2050.

There is widespread support for climate action worldwide. Fossil fuels can be phased out by stopping subsidising them, conserving energy and switching to energy sources that do not produce significant carbon pollution. These energy sources include wind, solar, hydro, and nuclear power. Cleanly generated electricity can replace fossil fuels for powering transportation, heating buildings, and running industrial processes. Carbon can also be removed from the atmosphere, for instance by increasing forest cover and farming with methods that store carbon in soil.

MasterFormat

ASTM standard for sustainability assessment of building products relies on MasterFormat to organize the data. MasterFormat is an organizational component

MasterFormat is a standard for organizing specifications and other written information for commercial and institutional building projects in the U.S. and Canada. Sometimes referred to as the "Dewey Decimal System" of building construction, MasterFormat is a product of the Construction Specifications Institute (CSI) and Construction Specifications Canada (CSC). It provides a master list of Divisions, and Section numbers with associated titles within each Division, to organize information about a facility's construction requirements and associated activities.

MasterFormat is used throughout the construction industry to format specifications for construction contract documents. The purpose of this format is to assist the user in organizing information into distinct groups when creating contract documents, and to assist the user searching for specific information in consistent locations. The information contained in MasterFormat is organized in a standardized outline format within 50 Divisions (16 Divisions pre-2004). Each Division is subdivided into a number of Sections.

Resident Evil 7: Biohazard

atmospheric, slow-burning horror of the original". He disagreed with Ryckert's assessment that the first-person was a bold reinvention, instead praising it for

Resident Evil 7: Biohazard is a 2017 survival horror game developed and published by Capcom. The player controls Ethan Winters as he searches for his long-missing wife in a derelict plantation occupied by an infected family, solving puzzles and fighting enemies. Resident Evil 7 diverges from the more action-oriented Resident Evil 5 and Resident Evil 6, returning to the franchise's survival horror roots, emphasizing exploration. It is the first main Resident Evil game to use a first-person view.

Resident Evil 7 is the first full-length game to use Capcom's in-house RE Engine. The development was led by Koshi Nakanishi, director of Resident Evil: Revelations. A year prior to its announcement at E3 2016, it was presented as a virtual reality demo called Kitchen. The team took inspiration from the 1981 film The Evil Dead, scaled back the game to one location, and used a first-person perspective to immerse players. Two downloadable content scenarios were released, Not a Hero and End of Zoe.

Resident Evil 7 was released in January 2017 for PlayStation 4, Windows, Xbox One, followed by a cloud version for the Nintendo Switch in May 2018 in Japan and December 2022 worldwide, and PlayStation 5 and Xbox Series X/S versions in June 2022. iOS, iPadOS and macOS versions of the game were released on July 2, 2024. It also supports the PlayStation VR headset. The game received generally favorable reviews and was considered a return to form for the series; critics praised the visuals, gameplay, story, innovation, and uses of virtual reality, but the boss battles and final chapter drew some criticism. By November 2024, the game had sold 14 million units. It was nominated for several end-of-year accolades. A direct sequel, Resident Evil Village, was released on May 7, 2021.

Master craftsman

In the European guild system, only masters and journeymen were allowed to be members of the guild. An aspiring master would have to pass through the career

Historically, a master craftsman or master tradesman (sometimes called only master or grandmaster) was a member of a guild. The title survives as the highest professional qualification in craft industries.

In the European guild system, only masters and journeymen were allowed to be members of the guild. An aspiring master would have to pass through the career chain from apprentice to journeyman before he could be elected to become a master craftsman. He would then have to produce a sum of money and a masterpiece before he could actually join the guild. If the masterpiece was not accepted by the masters, he was not allowed to join the guild and possibly remained a journeyman for the rest of his life.

Sexual function

a modified version of Masters and Johnson's work. The aspects of sexual function determined as being relevant to the assessment include; sexual desire

Sexual function is how the body reacts in different stages of the sexual response cycle. It is defined as the ability of an individual to react sexually or to experience sexual pleasure.
