Changing room

changing room, locker room (usually in a sports, theater, or staff context), or changeroom (regional use) is a room or area designated for changing one's

A changing room, locker room (usually in a sports, theater, or staff context), or changeroom (regional use) is a room or area designated for changing one's clothes. Changing-rooms are provided in a semi-public situation to enable people to change clothes with varying degrees of privacy.

A fitting room, or dressing room, is a room where people try on clothes, such as in a department store.

Separate changing rooms may be provided for men and women, or there may be a non-gender-specific open space with individual cubicles or stalls, as with unisex public toilets. Many changing rooms include toilets, sinks and showers. Sometimes a changing room exists as a small portion of a restroom/washroom. For example, the men's and women's washrooms in Toronto's Sankofa Square (formerly Yonge–Dundas Square) (which includes a water play area) each include a change area which is a blank counter space at the end of a row of sinks. In this case, the facility is primarily a washroom, and its use as a changing room is minimal, since only a small percentage of users change into bathing suits. Sometimes a person may change their clothes in a toilet cubicle of a washroom.

Larger changing rooms are usually found at public beaches, or other bathing areas, where most of the space is for changing, and minimal washroom space is included. Beach-style changing rooms are often large open rooms with benches against the walls. Some do not have a roof, providing just the barrier necessary to prevent people outside from seeing in.

Slowly changing dimension

data warehousing, a slowly changing dimension (SCD) is a dimension that stores data which, while generally stable, may change over time, often in an unpredictable

In data management and data warehousing, a slowly changing dimension (SCD) is a dimension that stores data which, while generally stable, may change over time, often in an unpredictable manner. This contrasts with a rapidly changing dimension, such as transactional parameters like customer ID, product ID, quantity, and price, which undergo frequent updates. Common examples of SCDs include geographical locations, customer details, or product attributes.

Various methodologies address the complexities of SCD management. The Kimball Toolkit has popularized a categorization of techniques for handling SCD attributes as Types 1 through 6. These range from simple overwrites (Type 1), to creating new rows for each change (Type 2), adding new attributes (Type 3), maintaining separate history tables (Type 4), or employing hybrid approaches (Type 6 and 7). Type 0 is available to model an attribute as not really changing at all. Each type offers a trade-off between historical accuracy, data complexity, and system performance, catering to different analytical and reporting needs.

The challenge with SCDs lies in preserving historical accuracy while maintaining data integrity and referential integrity. For instance, a fact table tracking sales might be linked to a dimension table containing information about salespeople and their assigned regional offices. If a salesperson is transferred to a new office, historical sales reports need to reflect their previous assignment without breaking the relationships between the fact and dimension tables. SCDs provide mechanisms to manage such changes effectively.

Climate change

Dentener, Frank J.; et al. (2021). "Chapter 2: Changing state of the climate system" (PDF). Climate Change 2021: The Physical Science Basis. Contribution

Present-day climate change includes both global warming—the ongoing increase in global average temperature—and its wider effects on Earth's climate system. Climate change in a broader sense also includes previous long-term changes to Earth's climate. The current rise in global temperatures is driven by human activities, especially fossil fuel burning since the Industrial Revolution. Fossil fuel use, deforestation, and some agricultural and industrial practices release greenhouse gases. These gases absorb some of the heat that the Earth radiates after it warms from sunlight, warming the lower atmosphere. Carbon dioxide, the primary gas driving global warming, has increased in concentration by about 50% since the pre-industrial era to levels not seen for millions of years.

Climate change has an increasingly large impact on the environment. Deserts are expanding, while heat waves and wildfires are becoming more common. Amplified warming in the Arctic has contributed to thawing permafrost, retreat of glaciers and sea ice decline. Higher temperatures are also causing more intense storms, droughts, and other weather extremes. Rapid environmental change in mountains, coral reefs, and the Arctic is forcing many species to relocate or become extinct. Even if efforts to minimize future warming are successful, some effects will continue for centuries. These include ocean heating, ocean acidification and sea level rise.

Climate change threatens people with increased flooding, extreme heat, increased food and water scarcity, more disease, and economic loss. Human migration and conflict can also be a result. The World Health Organization calls climate change one of the biggest threats to global health in the 21st century. Societies and ecosystems will experience more severe risks without action to limit warming. Adapting to climate change through efforts like flood control measures or drought-resistant crops partially reduces climate change risks, although some limits to adaptation have already been reached. Poorer communities are responsible for a small share of global emissions, yet have the least ability to adapt and are most vulnerable to climate change.

Many climate change impacts have been observed in the first decades of the 21st century, with 2024 the warmest on record at +1.60 °C (2.88 °F) since regular tracking began in 1850. Additional warming will increase these impacts and can trigger tipping points, such as melting all of the Greenland ice sheet. Under the 2015 Paris Agreement, nations collectively agreed to keep warming "well under 2 °C". However, with pledges made under the Agreement, global warming would still reach about 2.8 °C (5.0 °F) by the end of the century. Limiting warming to 1.5 °C would require halving emissions by 2030 and achieving net-zero emissions by 2050.

There is widespread support for climate action worldwide. Fossil fuels can be phased out by stopping subsidising them, conserving energy and switching to energy sources that do not produce significant carbon

pollution. These energy sources include wind, solar, hydro, and nuclear power. Cleanly generated electricity can replace fossil fuels for powering transportation, heating buildings, and running industrial processes. Carbon can also be removed from the atmosphere, for instance by increasing forest cover and farming with methods that store carbon in soil.

Everybody's Changing

room. "Everybody's Changing" uses similar instrumentation as is used throughout Hopes and Fears. The style of "Everybody's Changing" has been described

"Everybody's Changing" is a song performed by English alternative rock band Keane. It was released as the second single from their debut studio album, *Hopes and Fears* (2004). After a single release on Fierce Panda in May 2003, which peaked at number 122 in the UK Singles Chart, it was re-released on Island on 3 May 2004 after the success of "Somewhere Only We Know" and reached number four. It is also used in the TV series, *In Plain Sight* and can also be heard in the final moments of *One Tree Hill* episode "Truth Doesn't Make a Noise" and *Scrubs* episode "My Day at the Races".

In August 2006, the song was rated No. 79 from the top 100 greatest songs of all time by *The Sun*. That same year, English singer Lily Allen recorded a cover of the song, released on her single "Littlest Things" (a version later appeared on the 2007 compilation album, *The Saturday Sessions: The Dermot O'Leary Show*).

Changing Rooms

all the Changing Rooms stars? ". The Guardian. Retrieved 18 April 2017. Williams, Kathryn (18 August 2021). "The designers on the new Changing Room revival"

Changing Rooms is a do-it-yourself home improvement show broadcast in the United Kingdom on the BBC between 1996 and 2004. The series was revived on Channel 4 in 2021.

The show was one of a number of home improvement and lifestyle shows popular in the late 1990s and early 2000s. The show was later franchised, generally under the same name, for the local TV markets in the United States, New Zealand and Australia.

"Changing Nature" is the seventh episode of the fourth season of the ABC sitcom Dinosaurs as well as the final episode of the series before its apparent cancelation. It originally aired on ABC on July 20, 1994, as the network series finale. The episode had an unexpectedly dark and depressing tone, which caught a lot of fans and critics off-guard.
